

*Project Seminar on*  
**Analysis of Recovery Time Objective (RTO) of Disaster  
Recovery System for Microservice Enterprise Architecture**

*in partial fulfillment of*  
**VII Semester Bachelor of Engineering (B.E.)  
Electronics Engineering**

**PROJECT PHASE- I (ENP 455)**

**Name of Students (Roll No.)**

1. Tanmay Sahare (06)
2. Sankalp Kitey (14)
3. Kirti Laad (49)
4. Yash Kumbhare(62)

**Guided by**  
**D.M.KOTAMBKAR (Guide)**  
**S.S.BOKARE (Joint Director C-DAC)(CO-Guide)**

**Department of Electronics Engineering**  
Shri Ramdeobaba College of Engineering and Management,  
Ramdeo Tekadi, Gittikhadan, Katol Road, Nagpur 440013, India.  
Session 2023-24

# Table of Contents

1.	Introduction
2.	Literature Review
3.	Motivation
4.	Objective
5.	Methodology
6.	Data Visualisation
7.	Dependency matrix and equations
8.	References

Understanding What is  
Microservice.

Reading and Analysing Several  
Research Papers

Visualization and Relation of  
RTO

What is a Disaster for these  
Microservices.

Choosing One Microservice  
as a Case Study

WHAT IS

DISASTER

RECOVERY

# LITERATURE REVIEW

Ref. No	Author	Title	Architecture	Year of Publication

graph TD; A[Microservice Architecture and its Impact on Software Projects] --> B[Scalability]; A --> C[Regular Updates]; A --> D[Short release Cycles]; A --> E[Maintainability]; A --> F[Active measures for Development Speed];
```

Scalability

Regular Updates

Short release  
Cycles

Maintainability

Active measures  
for Development  
Speed

# MOTIVATION

01

Growing Adoption of Microservice Architecture.

02

Ensuring Business Continuity.

03

Unique Challenges of Microservice Disaster Recovery.

04

Optimization for Cost and Efficiency.

05

Real-World Impact and Industry Relevance.

# OBJECTIVES

**01**

Understand Microservice Enterprise Architecture.

**02**

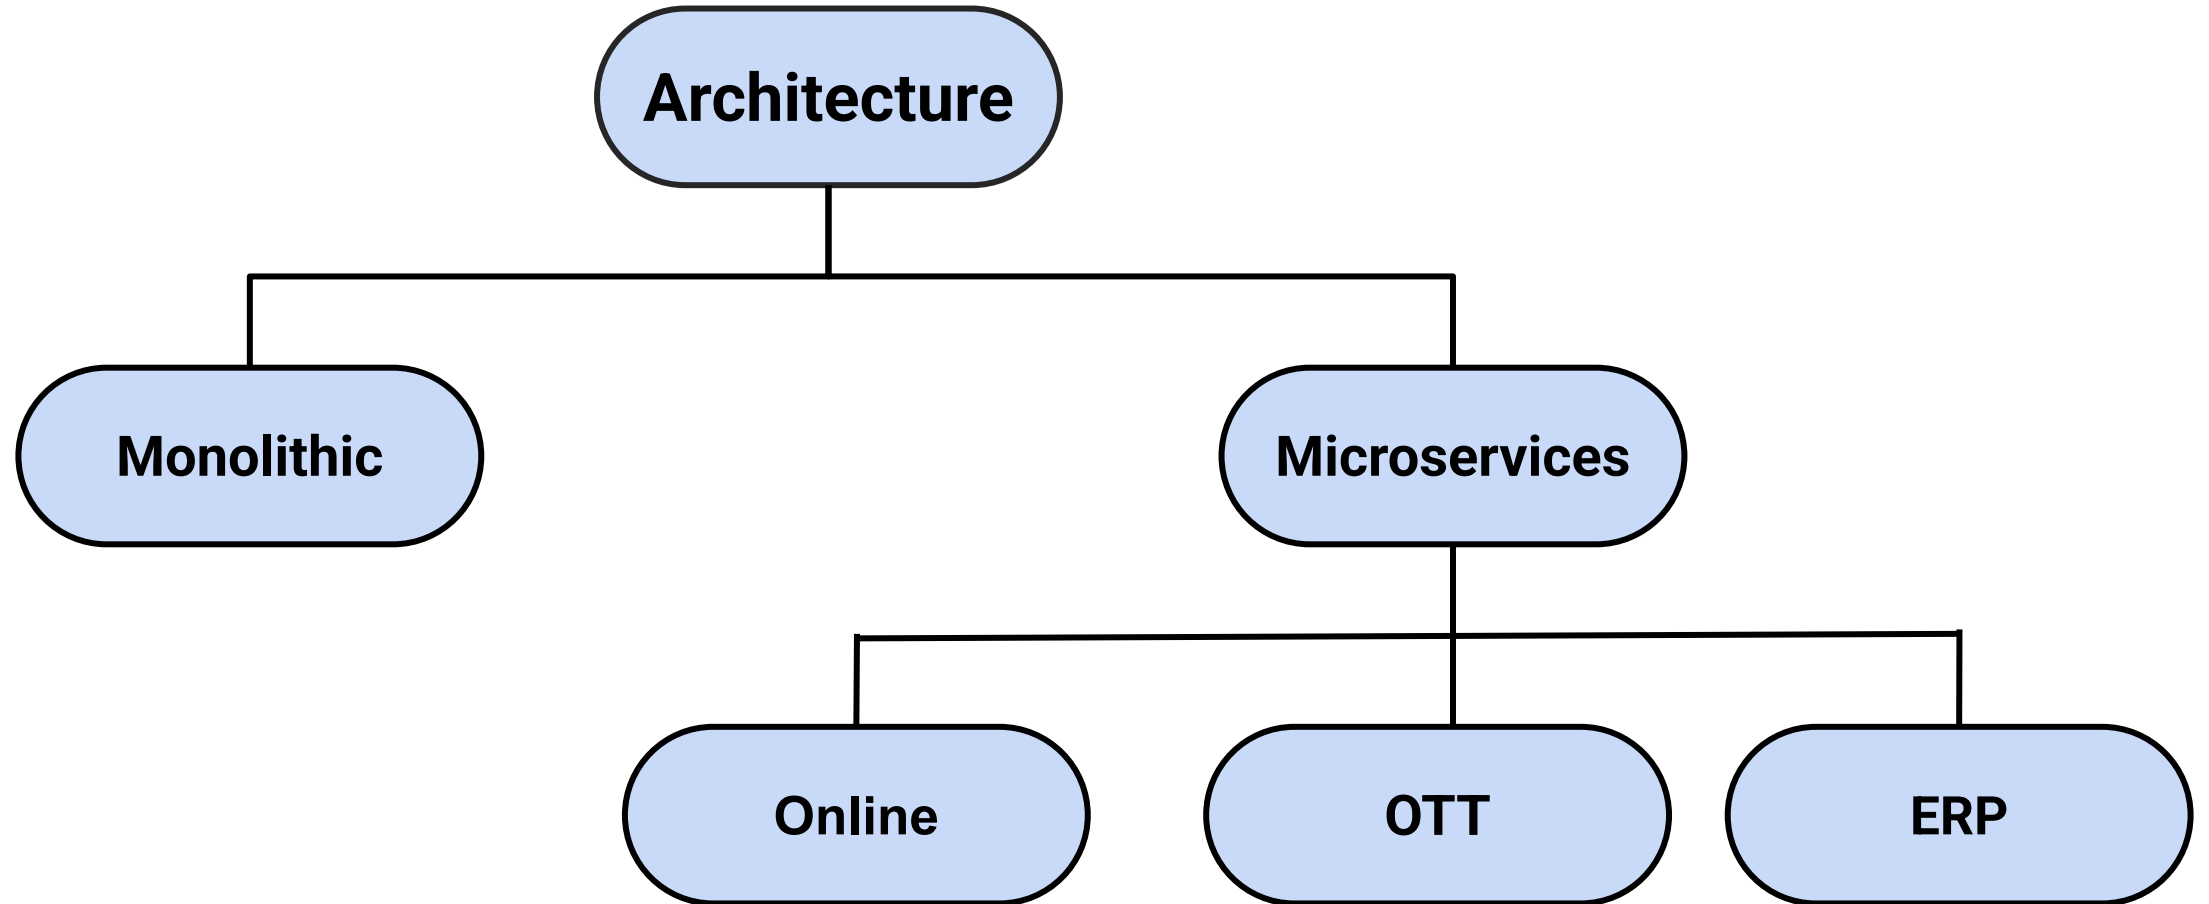

Introducing Disaster Recovery and Recovery Time Objective (RTO).

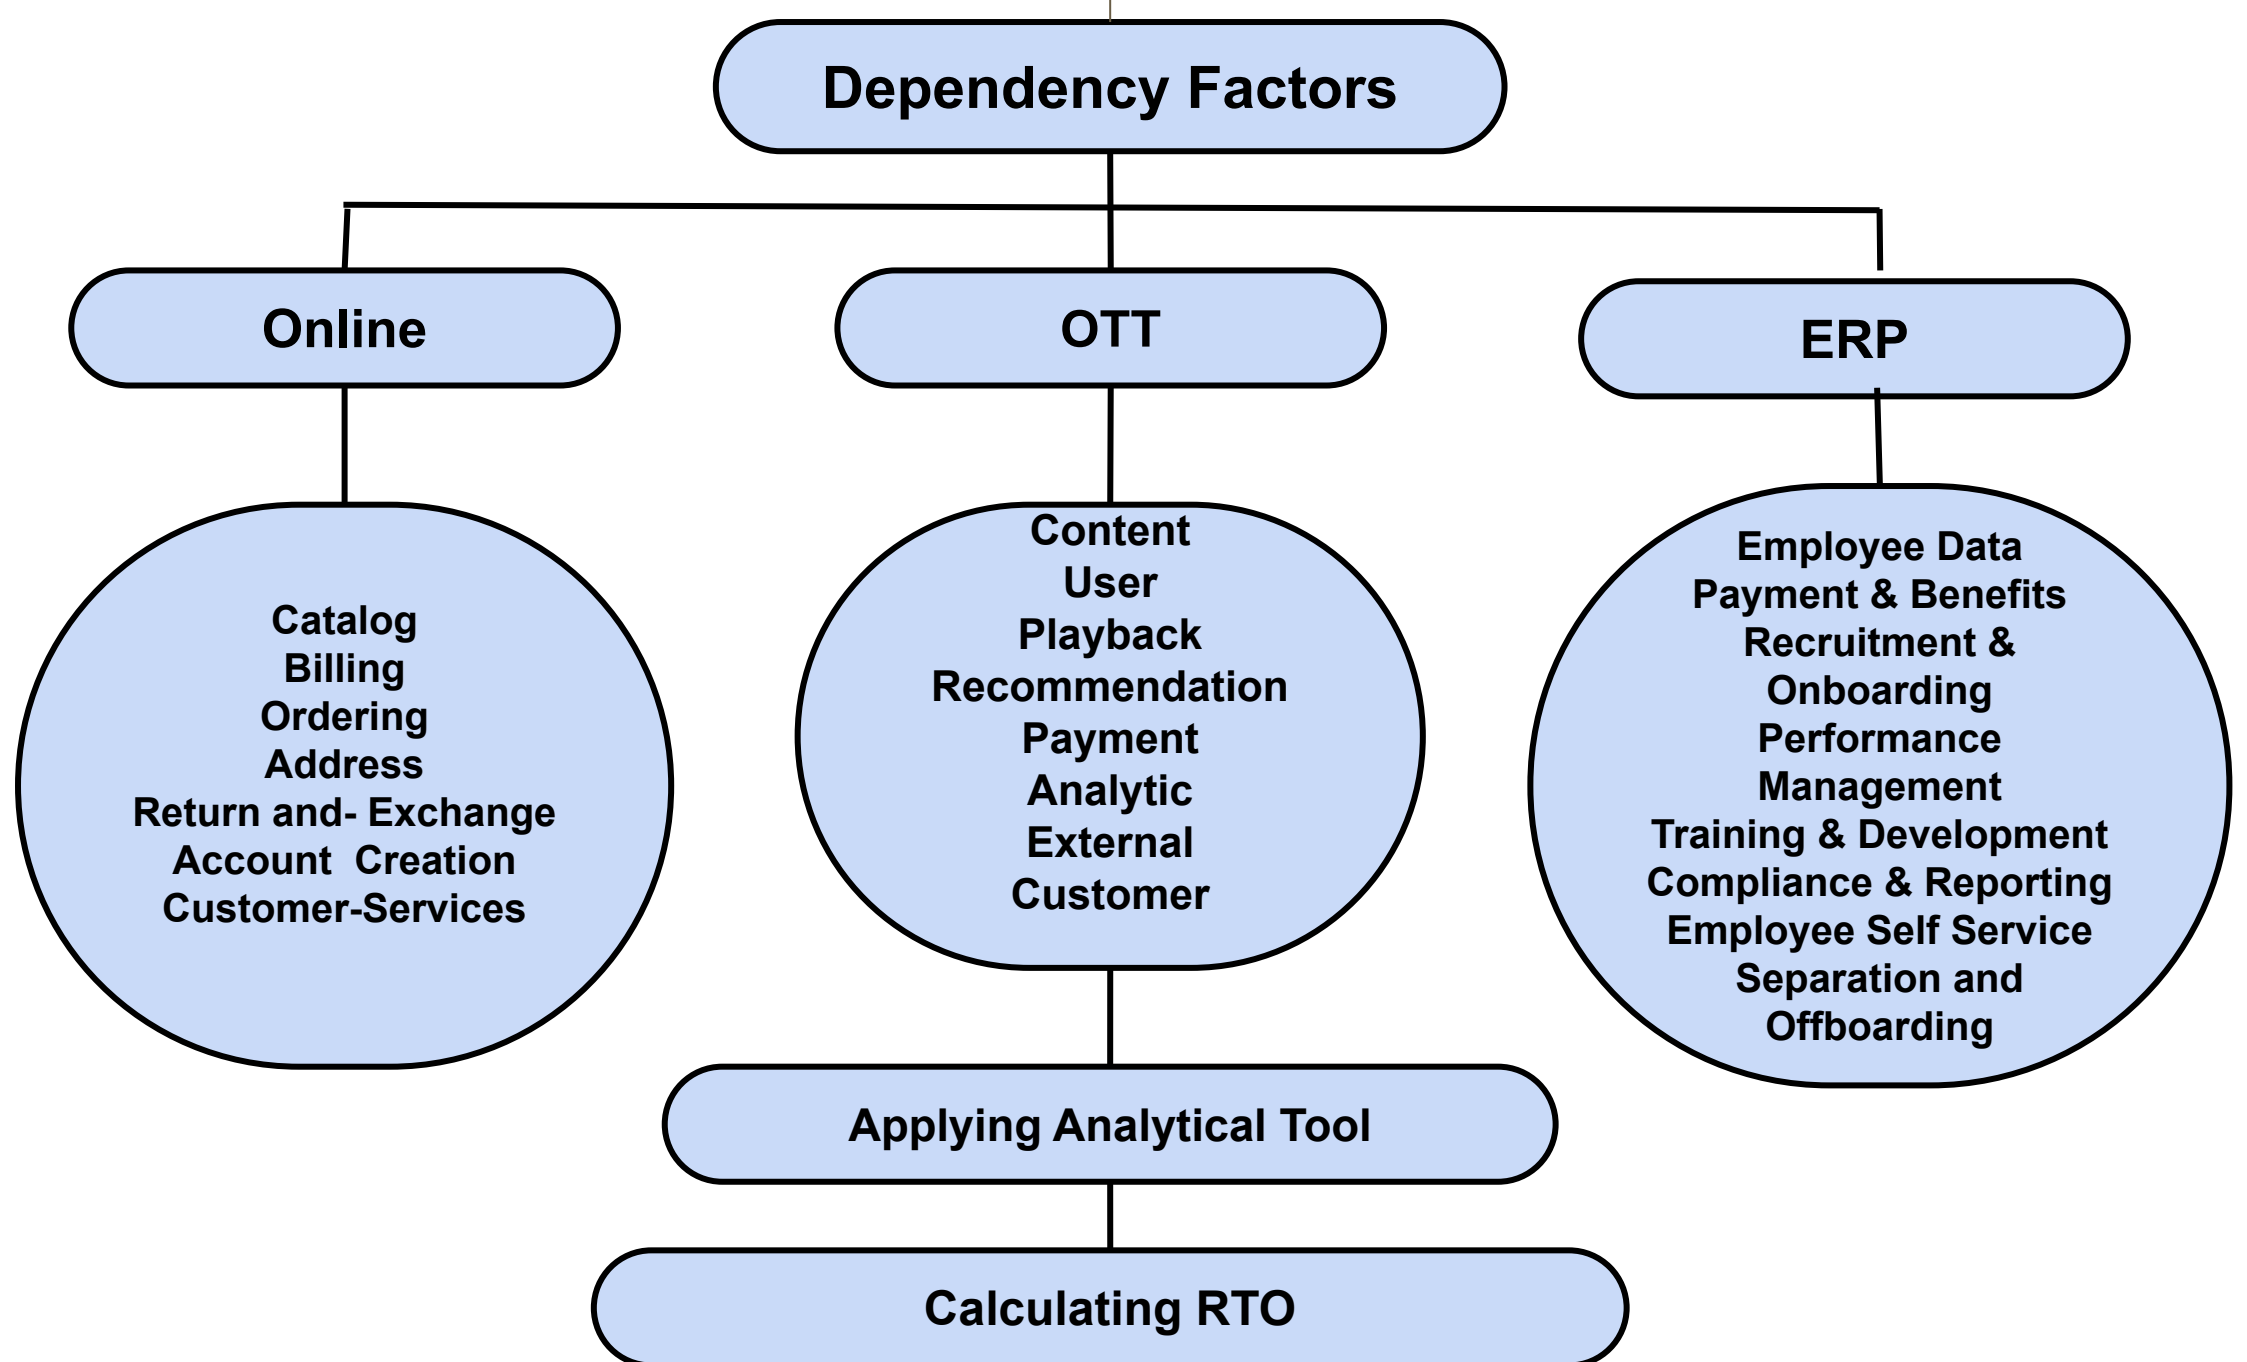

**03**

Strategies for Achieving Aggressive RTOs in Microservice Environment.

# METHODOLOGY

# Data Visualization

## Services

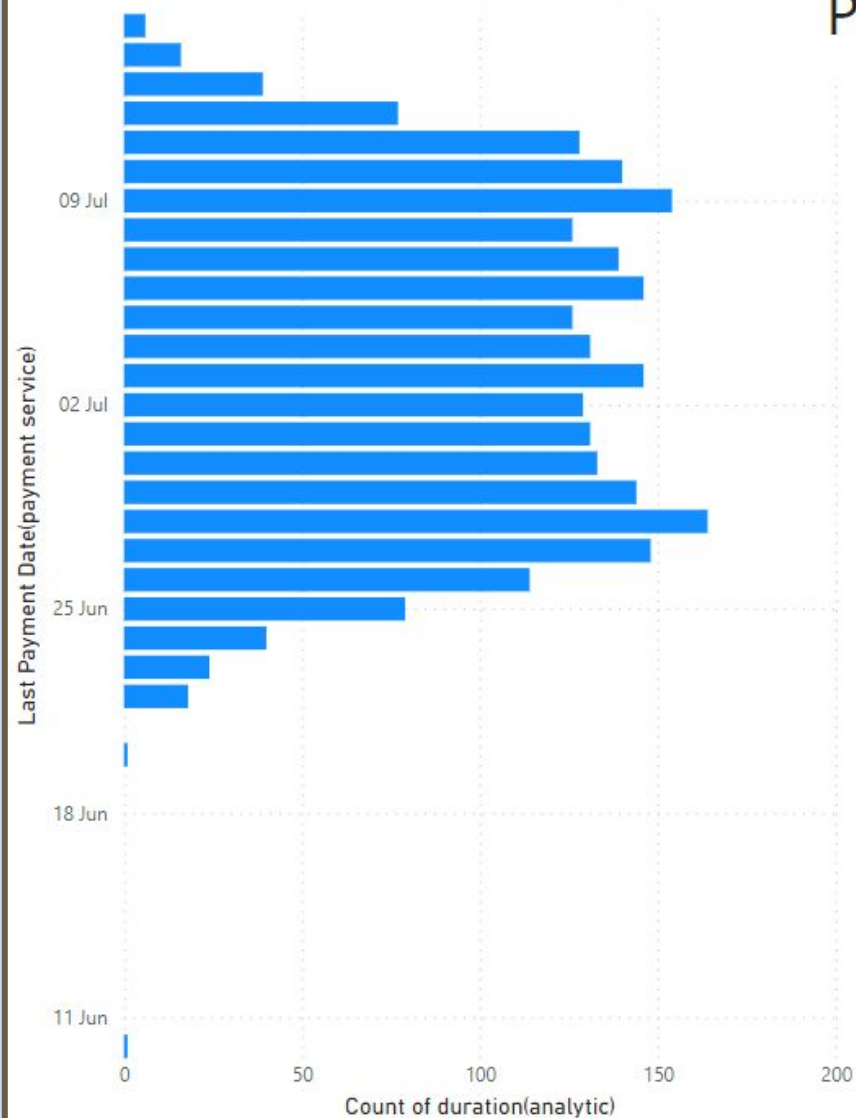

- 1) Payment Service
- 2) Content Service
- 3) Customer Service
- 4) External Service
- 5) Analytic Service

Power BI

Count of duration(analytic) by Last Payment Date(payment service)

## Payment Service

Count of Last Payment Date(payment service) by Device(extrnal)

Count of Last Payment Date(payment service) by rating(customer)

# Content Service

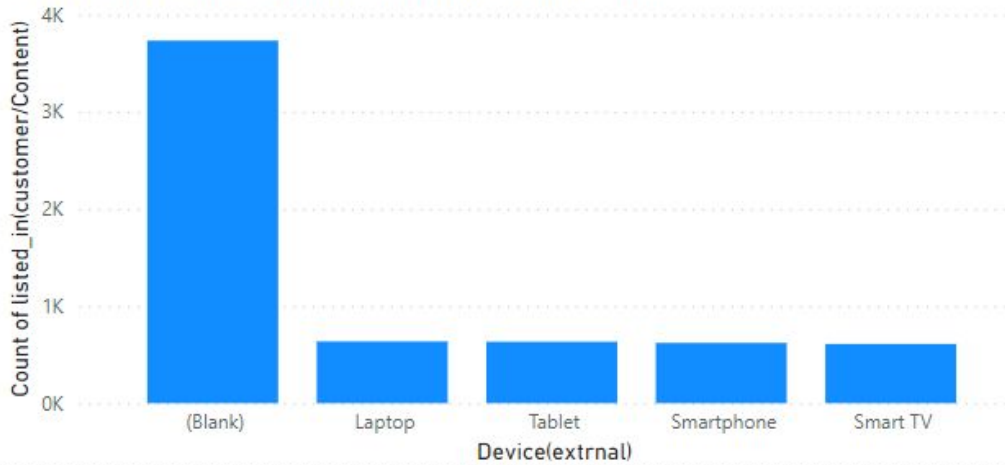

Count of duration(analytic) by listed\_in(customer/Content)

Count of listed\_in(customer/Content) by rating(customer)

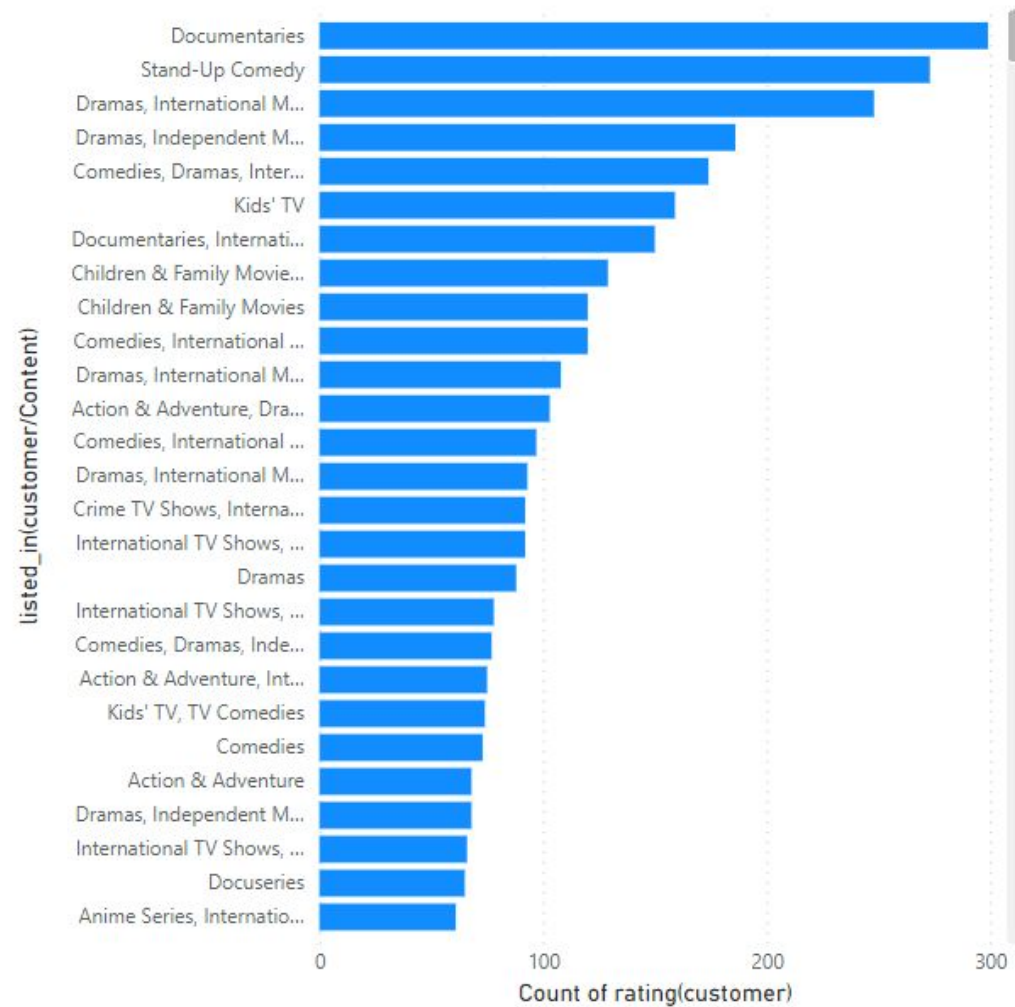

Count of listed\_in(customer/Content) by Device(extrnal)

# Customer Service

Count of rating(customer) by listed\_in(customer/Content)

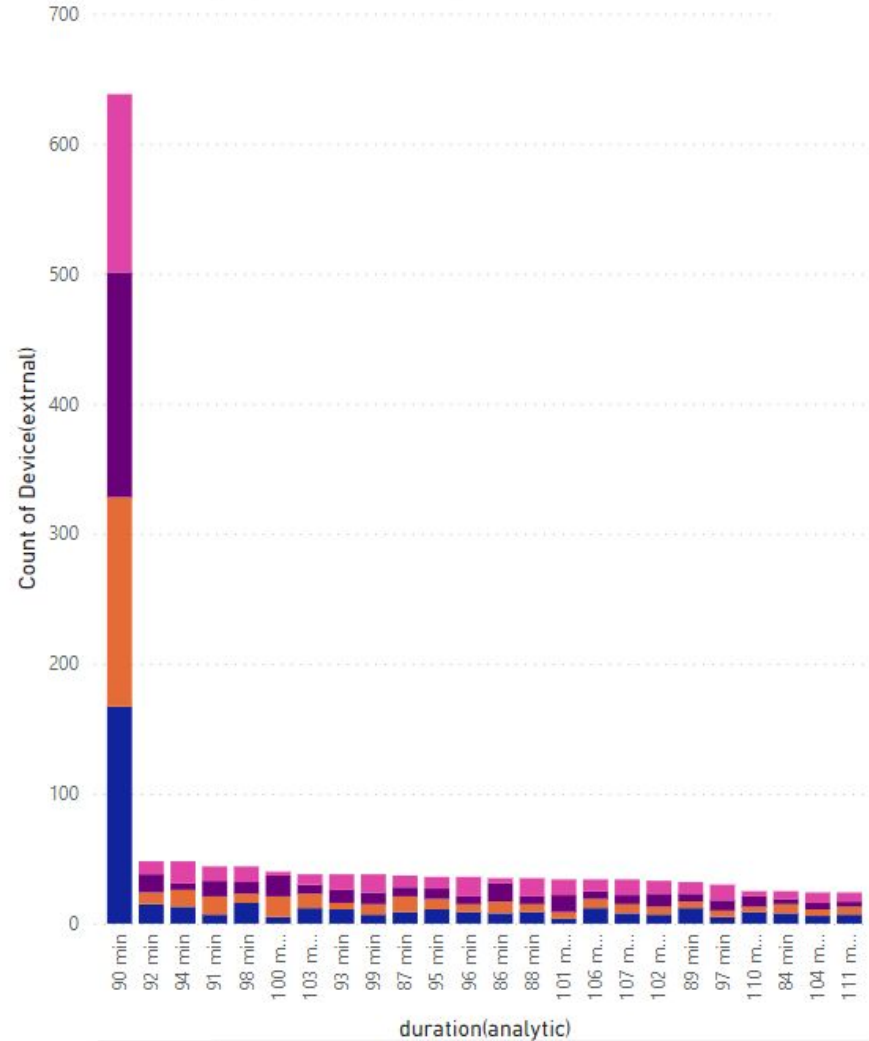

Count of duration(analytic) by rating(customer)

Count of Device(extrnal) by duration(analytic) and Device(extrnal)

Device(extrnal) ● Laptop ● Smart TV ● Smartphone ● Tablet

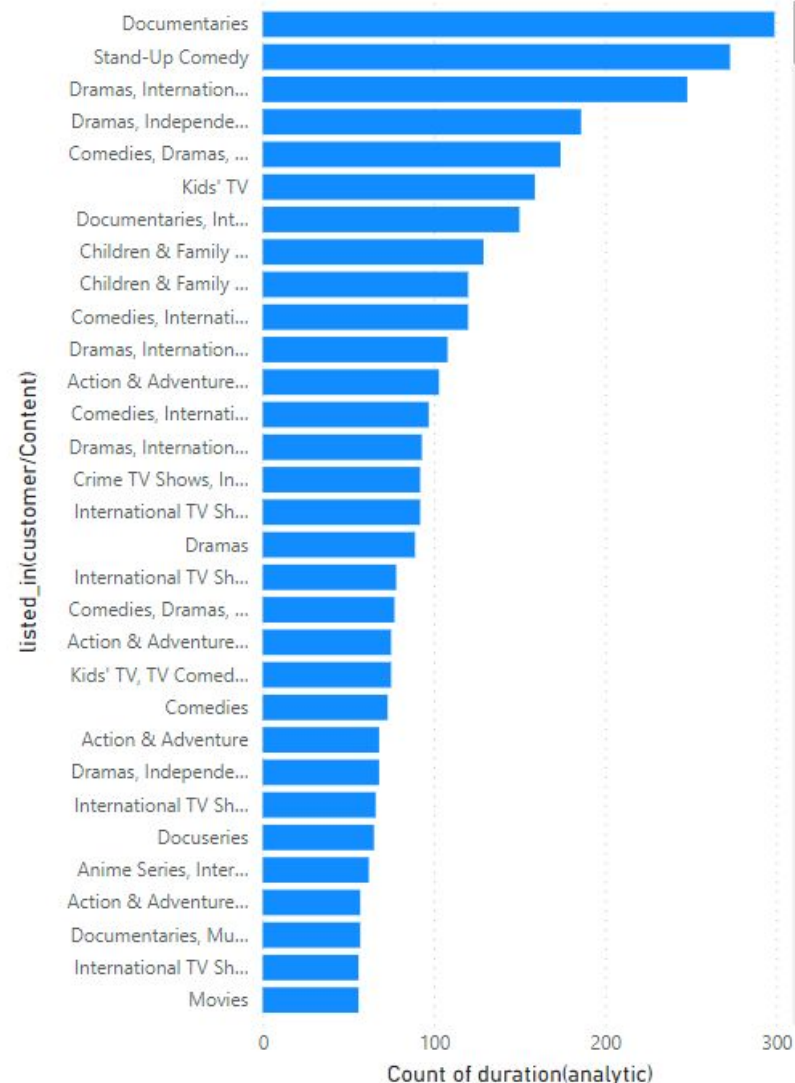

## External Service

Count of Device(extrnal) by rating(customer)

Count of duration(analytic) by listed\_in(customer/Content)

## Analytic Service

Count of duration(analytic) by Device(extrnal)

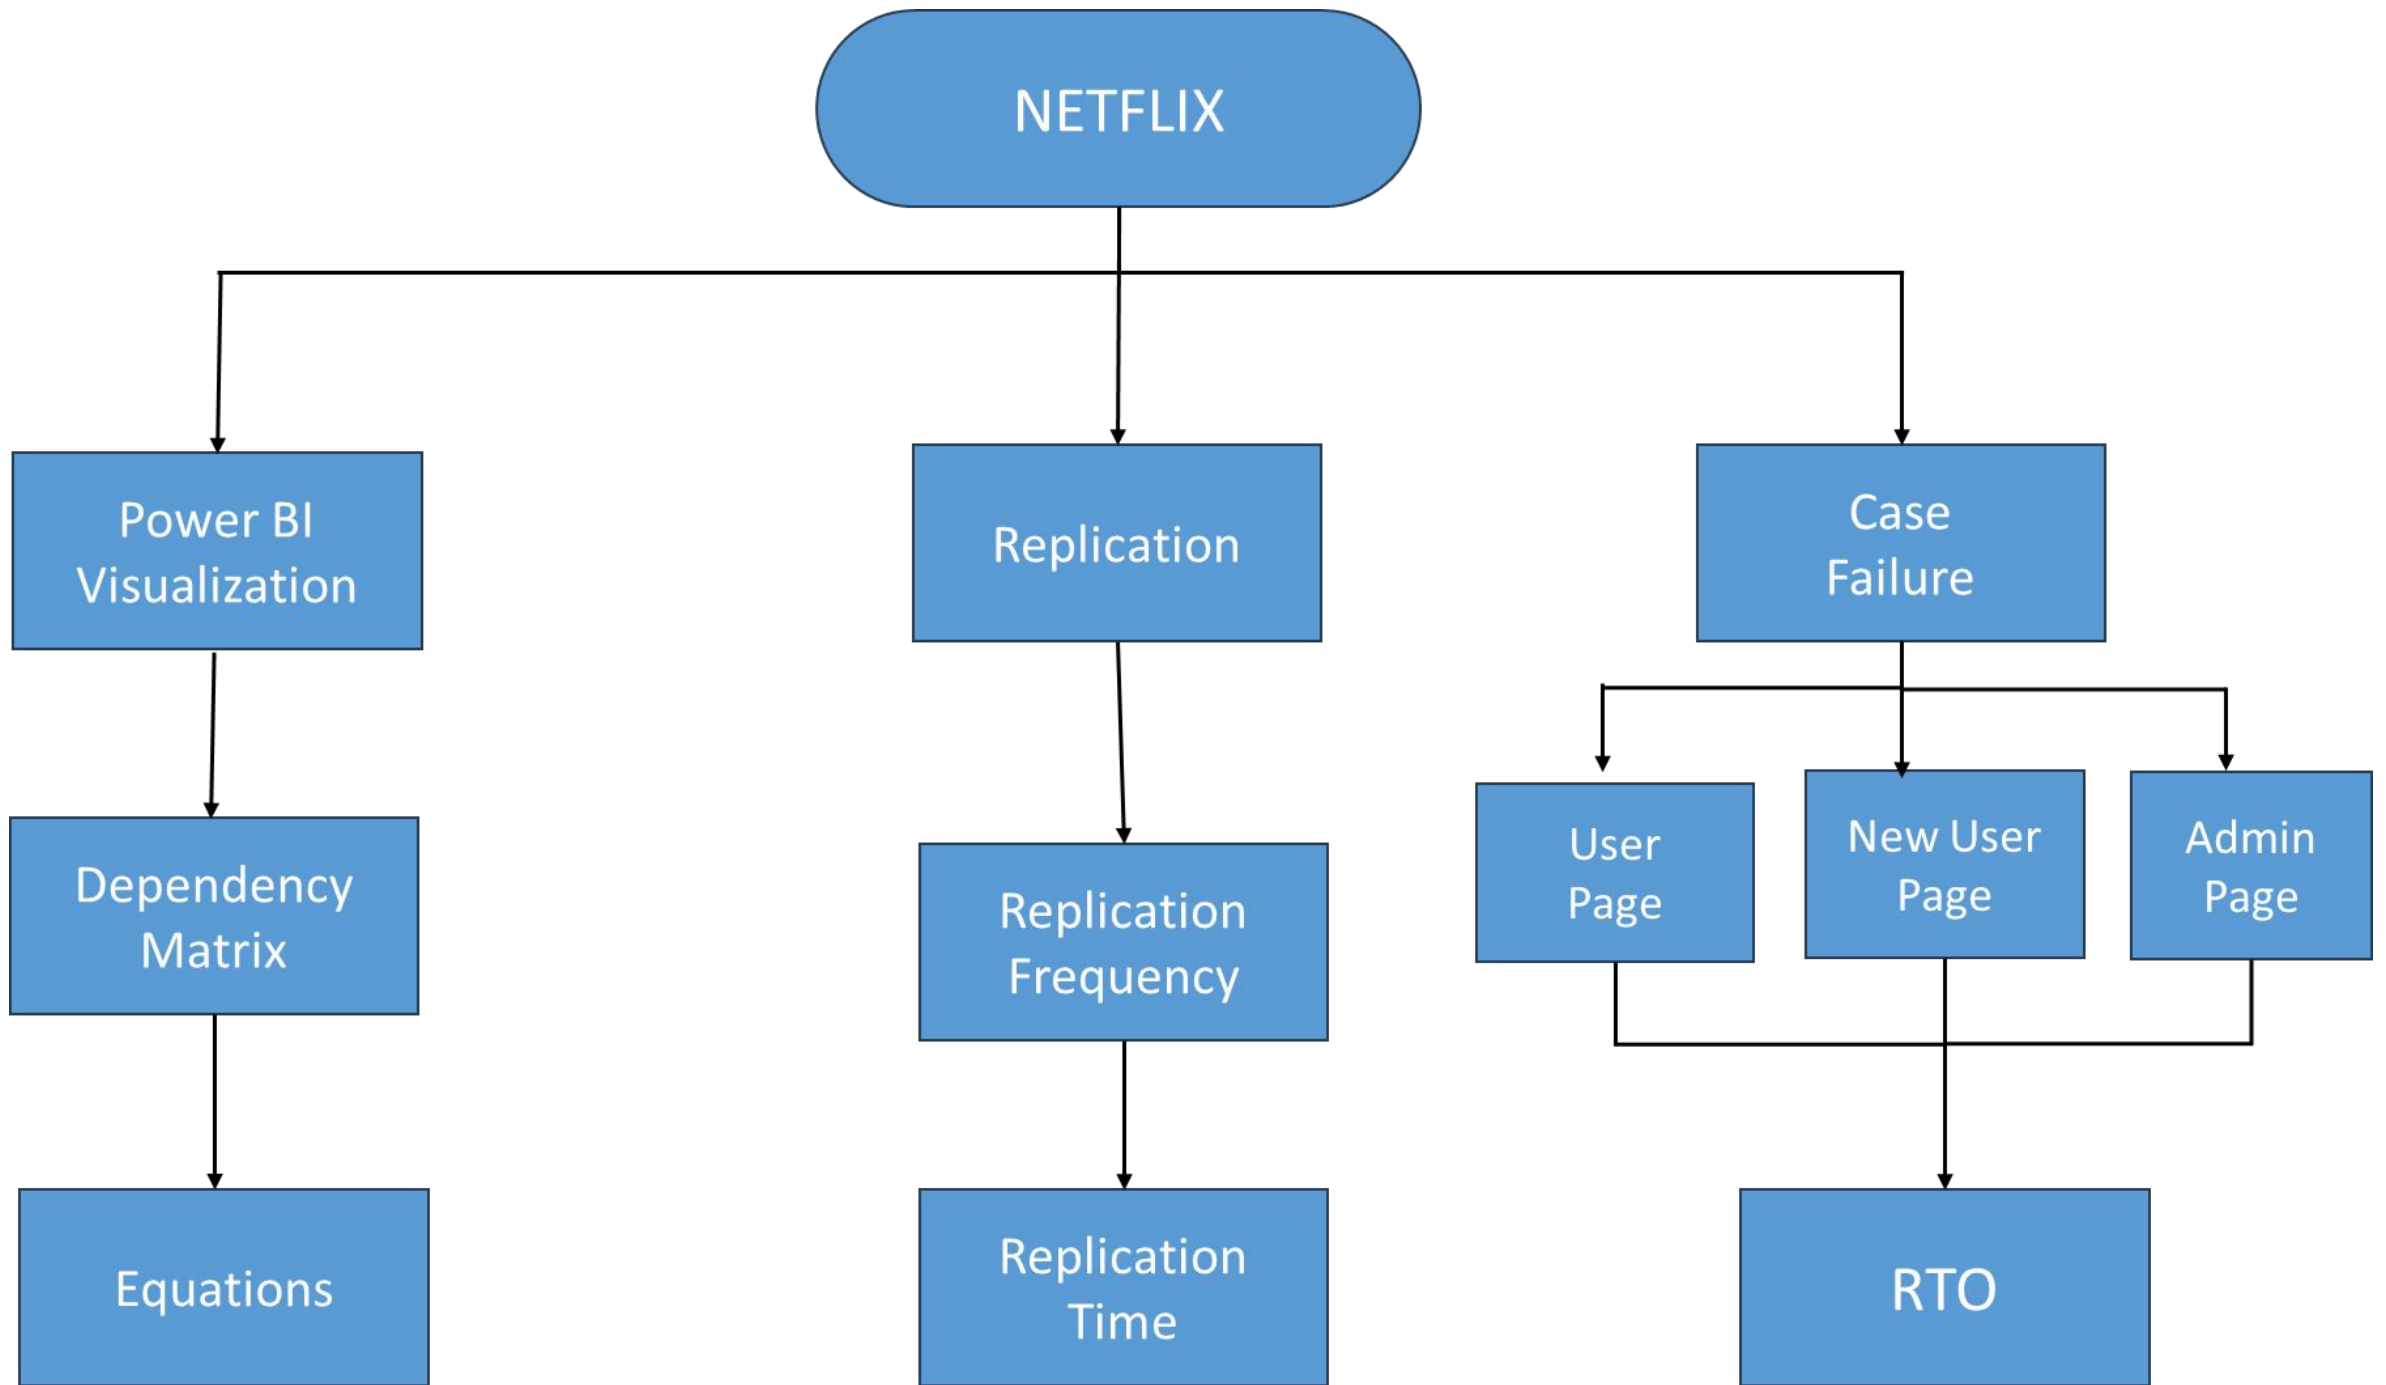

# Dependency Matrix

	Content	User	Playback	Recommendation	Payment	Analytic	External	Customer
Content	0	0	0	1	0	1	1	1
User	0	0	1	1	1	1	0	0
Playback	0	1	0	1	0	1	0	1
Recommendation	1	1	0	0	0	0	1	0
Payment	0	1	0	0	0	1	1	1
Analytic	1	1	1	1	0	0	1	0
External	1	0	0	1	0	1	0	1
Customer	1	1	0	1	0	1	0	0

# Dependency Matrix Equations

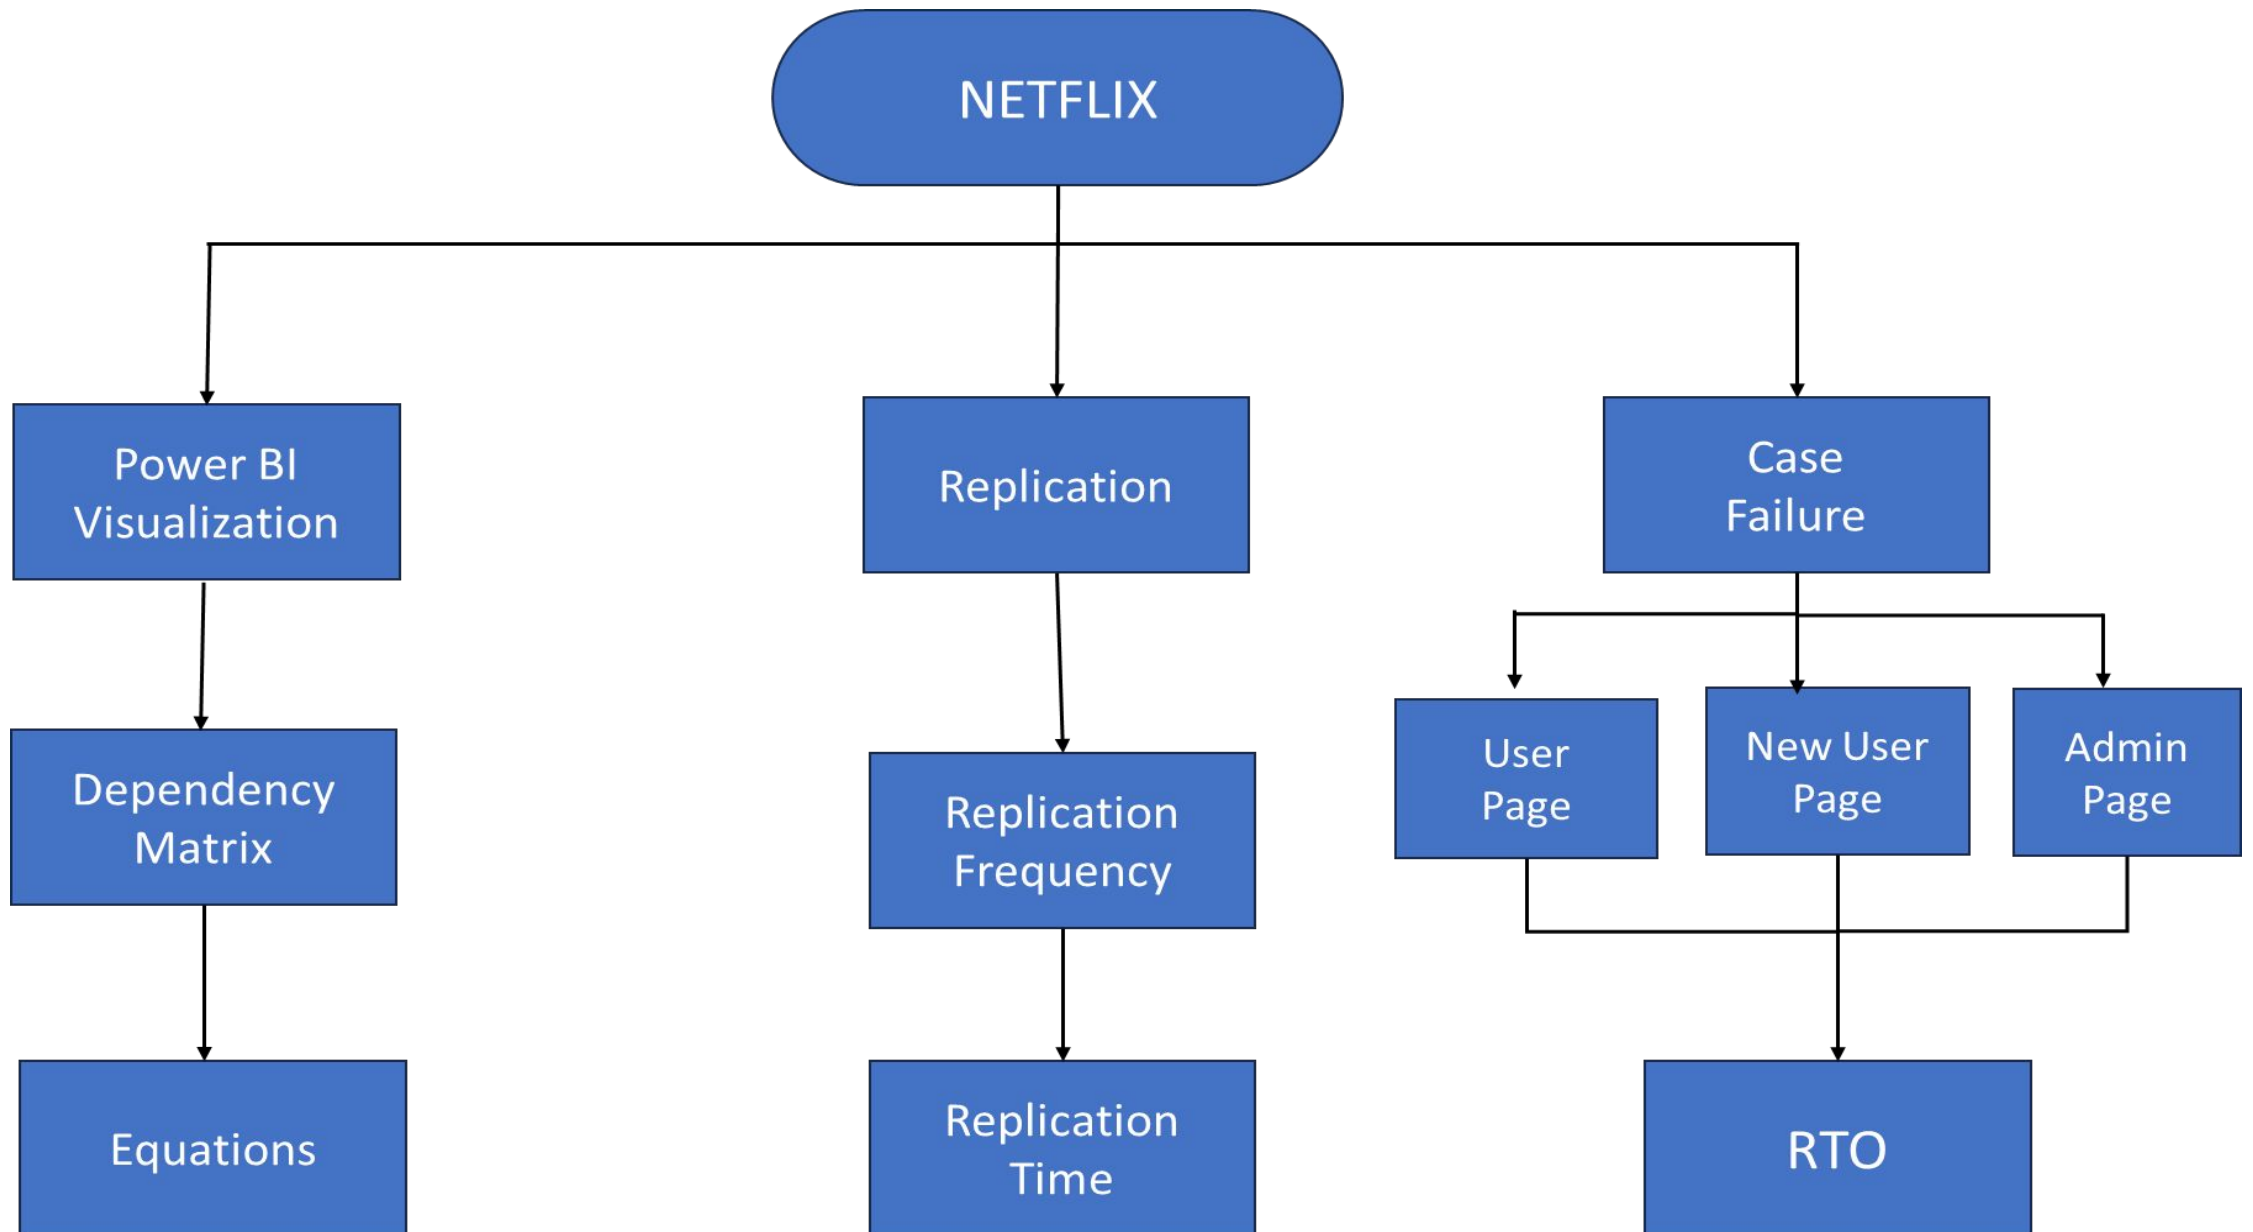

1. Content (A)  $x_A = C_{DA} \cdot x_D + C_{FA} \cdot x_F + C_{GA} \cdot x_G + C_{HA} \cdot x_H$
2. User (B)  $x_B = C_{CB} \cdot x_C + C_{DB} \cdot x_D + C_{EB} \cdot x_E + C_{FB} \cdot x_F$
3. Playback (C)  $x_C = C_{BC} \cdot x_B + C_{DC} \cdot x_D + C_{FC} \cdot x_F + C_{HC} \cdot x_H$
4. Recommendation (D)  $x_D = C_{AD} \cdot x_A + C_{BD} \cdot x_B + C_{GD} \cdot x_G$
5. Payment (E)  $x_E = C_{BE} \cdot x_B + C_{FE} \cdot x_F + C_{GE} \cdot x_G + C_{HE} \cdot x_H$
6. Analytic (F)  $x_F = C_{AF} \cdot x_A + C_{BF} \cdot x_B + C_{CF} \cdot x_C + C_{DF} \cdot x_D + C_{GF} \cdot x_G$
7. External (G)  $x_G = C_{AG} \cdot x_A + C_{DG} \cdot x_D + C_{FG} \cdot x_F + C_{HG} \cdot x_H$
8. Customer (H)  $x_H = C_{AH} \cdot x_A + C_{BH} \cdot x_B + C_{DH} \cdot x_D + C_{FH} \cdot x_F$

# RTO- Recovery Time Objective

The RTO is the target time you set for how quickly you want to recover a service, after it fails.

- 1) Detection Time (Dt)
- 2) Diagnosis Time (Dt)
- 3) Fix Time (Ft)
- 4) Restoration Time (Rt)
- 5) Verification Time (Vt)

$$\text{Total RTO} = Dt + Dt + Ft + Rt + Vt$$

# Assigning the Weights

## 1. Content Service (A - Weight: 0.20):

- Content Ingestion and Catalog Management: 0.05
- Content Recommendation Engine: 0.05
- Content Delivery and CDN Management: 0.03
- Content Metadata Management: 0.04
- Content Licensing and Rights Management: 0.03

## 3. Playback Service (C - Weight: 0.10):

- Video Playback Engine: 0.03
- Audio Playback Engine: 0.03
- Video Quality Optimization: 0.02
- Playback Control and User Interaction: 0.02

## 5. Payment Service (E - Weight: 0.15):

- Payment Gateway Integration: 0.06
- Subscription Management: 0.05
- Billing and Invoicing: 0.04

## 7. External Service (G - Weight: 0.05):

- Integration with Third-Party Services: 0.02
- External Content Providers: 0.01
- External API Management: 0.02

## 2. User Service (B - Weight: 0.10):

- User Authentication and Authorization: 0.03
- User Profile Management: 0.03
- User Preferences and Personalization: 0.02
- User Account Billing and Subscription: 0.02

## 4. Recommendation Service (D - Weight: 0.15):

- Recommendation Algorithms: 0.06
- User Behavior Tracking: 0.05
- Content Similarity Analysis: 0.04

## 6. Analytic Service (F - Weight: 0.10):

- Data Analytics and Reporting: 0.04
- User Engagement Analytics: 0.03
- Content Quality Analytics: 0.03

## 8. Customer Service (H - Weight: 0.15):

- Customer Support and Helpdesk: 0.07
- Customer Feedback and Surveys: 0.05
- User Community Forums: 0.03

# Replication Time

$$\text{Replication Time} = \text{Volume of Data} \times \text{Network Latency} \times 2$$

$$\text{Replication Time (seconds)} = 1 \text{ GB} \times (0.1 \text{ seconds per GB}) \times 2 = 0.2 \text{ seconds}$$

# Replication Frequency

## **Content Service (A - Weight: 0.20):**

- Content Ingestion and Catalog Management: Real-time (0 seconds delay).
- Content Recommendation Engine: Every 30-90 seconds
- Content Delivery and CDN Management: Every 60-150 seconds
- Content Metadata Management: Every 90-180 seconds
- Content Licensing and Rights Management: Every 150-300 seconds

## **User Service (B - Weight: 0.10):**

- User Authentication and Authorization: Real-time (0 seconds, 0 minutes delay).
- User Profile Management: Every 30-90 seconds
- User Preferences and Personalization: Every 60-150 seconds
- User Account Billing and Subscription: Every 90-180 seconds

## **Playback Service (C - Weight: 0.10):**

- Video Playback Engine: Real-time replication (0 seconds, 0 minutes delay).
- Audio Playback Engine: Every 60-150 seconds
- Video Quality Optimization: Every 90-180 seconds
- Playback Control and User Interaction: Every 150-300 seconds

## **Recommendation Service (D - Weight: 0.15):**

- Recommendation Algorithms: Real-time (0 seconds, 0 minutes delay).
- User Behavior Tracking: Every 30-90 seconds
- Content Similarity Analysis: Every 90-180 seconds

## **Payment Service (E - Weight: 0.15):**

- Payment Gateway Integration: Every 30-90 seconds
- Subscription Management: Every 60-150 seconds
- Billing and Invoicing: Every 90-180 seconds

## **Analytic Service (F - Weight: 0.10):**

- Data Analytics and Reporting: Every 300-900 seconds
- User Engagement Analytics: Every 450-1350 seconds
- Content Quality Analytics: Every 600-1800 seconds

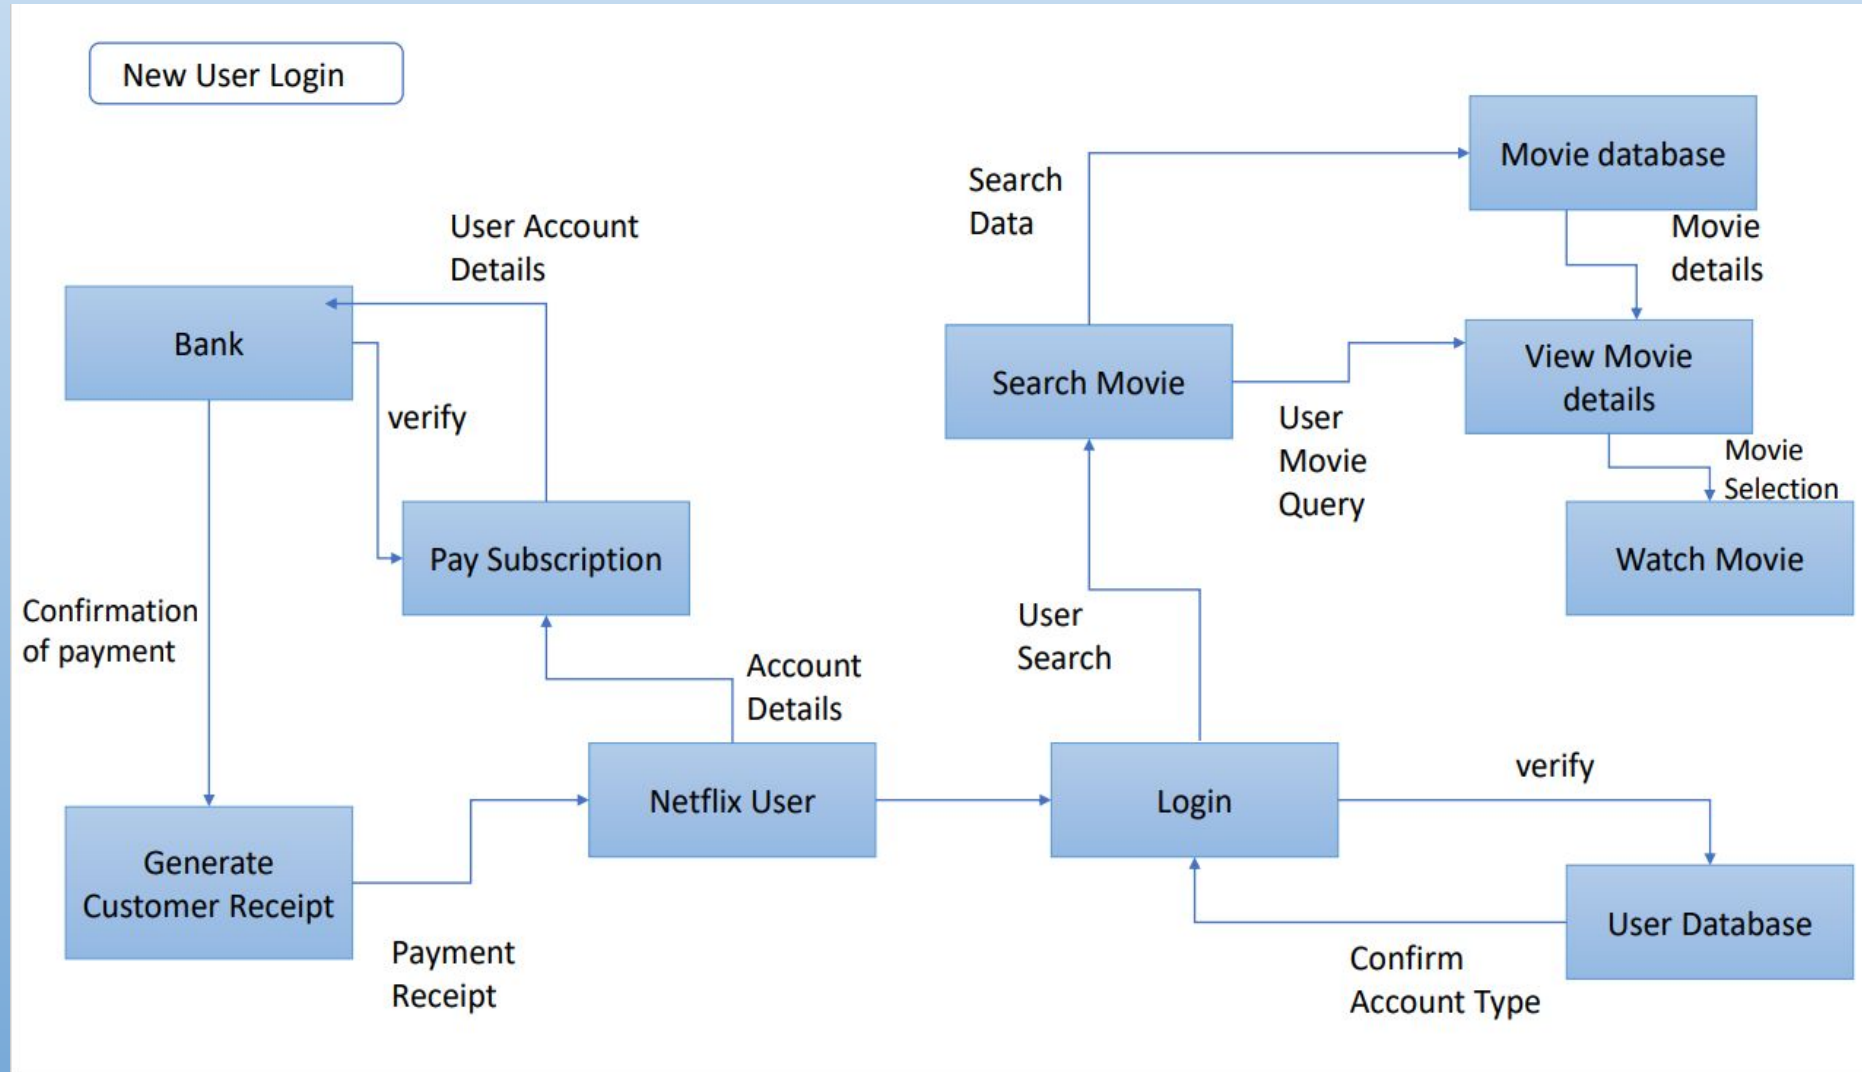

## **External Service (G - Weight: 0.05):**

- Integration with Third-Party Services: Every 60-150 seconds
- External Content Providers: Every 90-180 seconds
- External API Management: Every 60-150 seconds

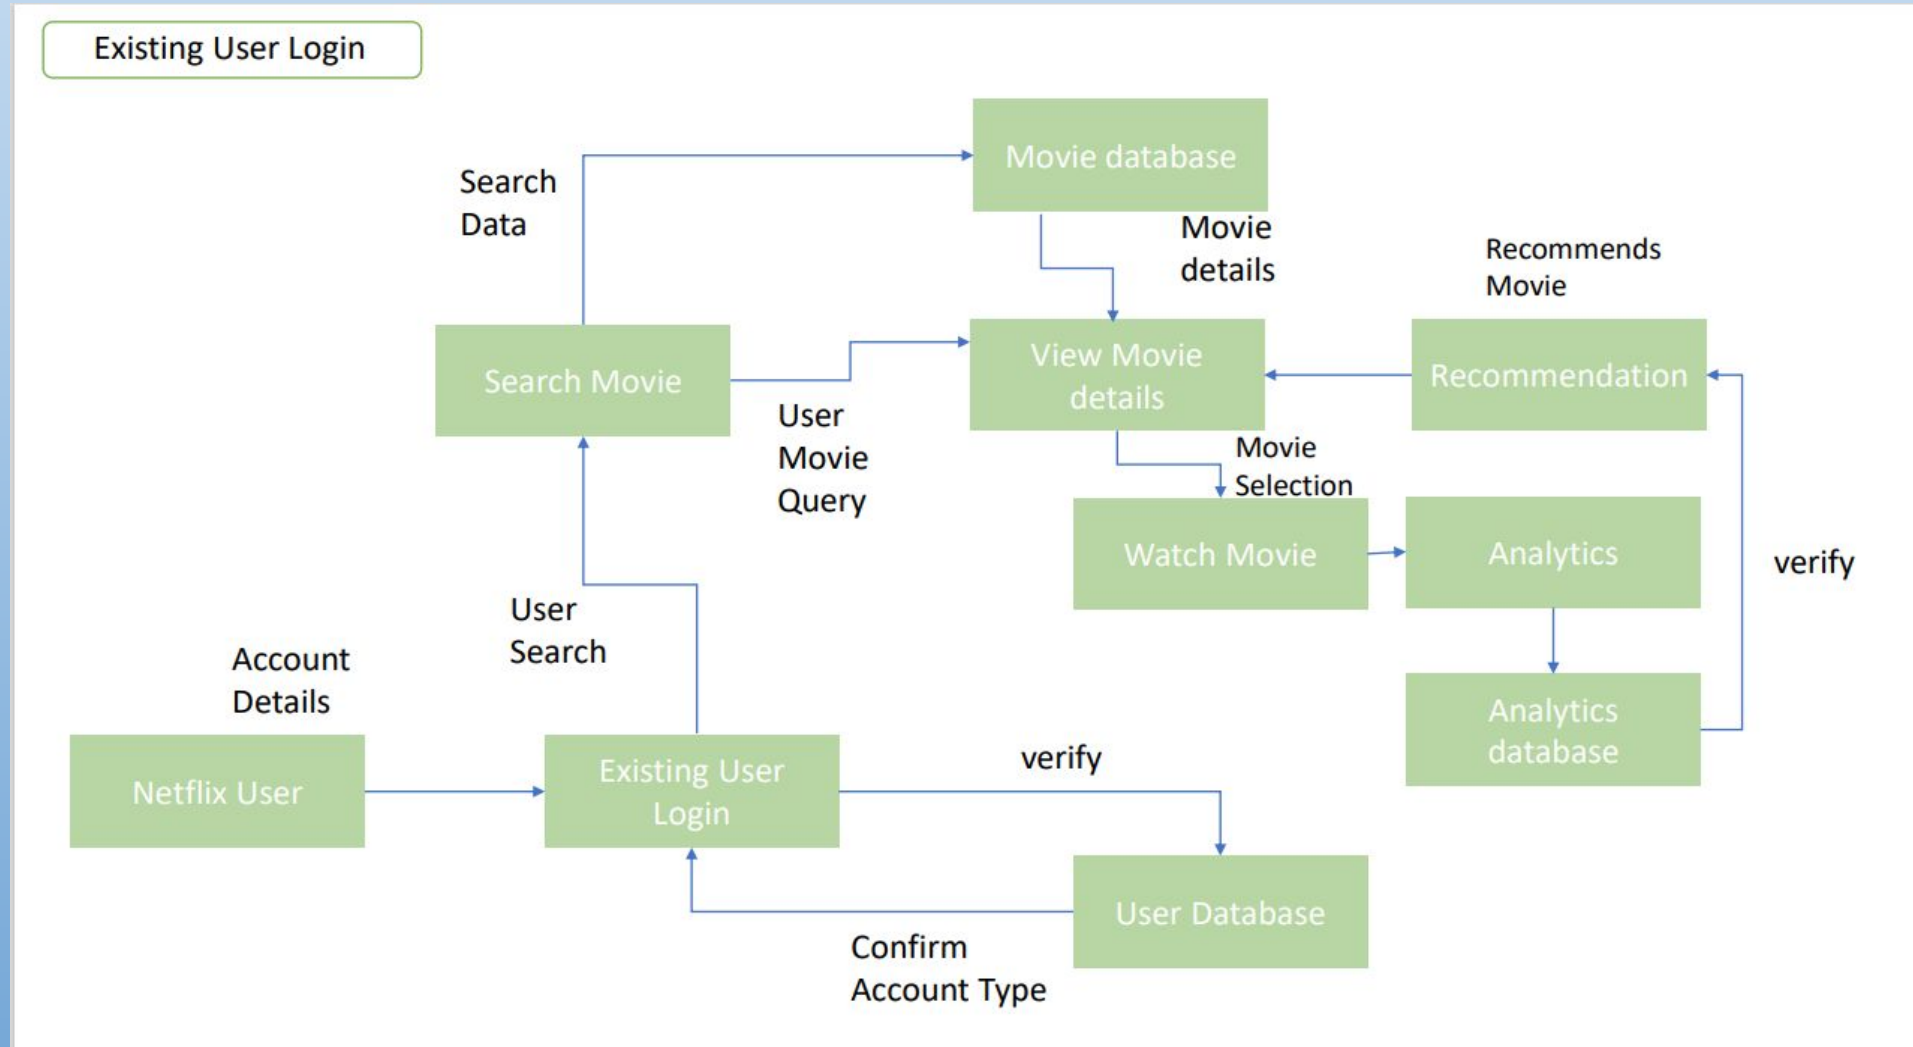

## **Customer Service (H - Weight: 0.15):**

- Customer Support and Helpdesk: Real-time replication (0 seconds, 0 minutes delay).
- Customer Feedback and Surveys: Every 300-900 seconds
- User Community Forums: Every 450-1350 seconds

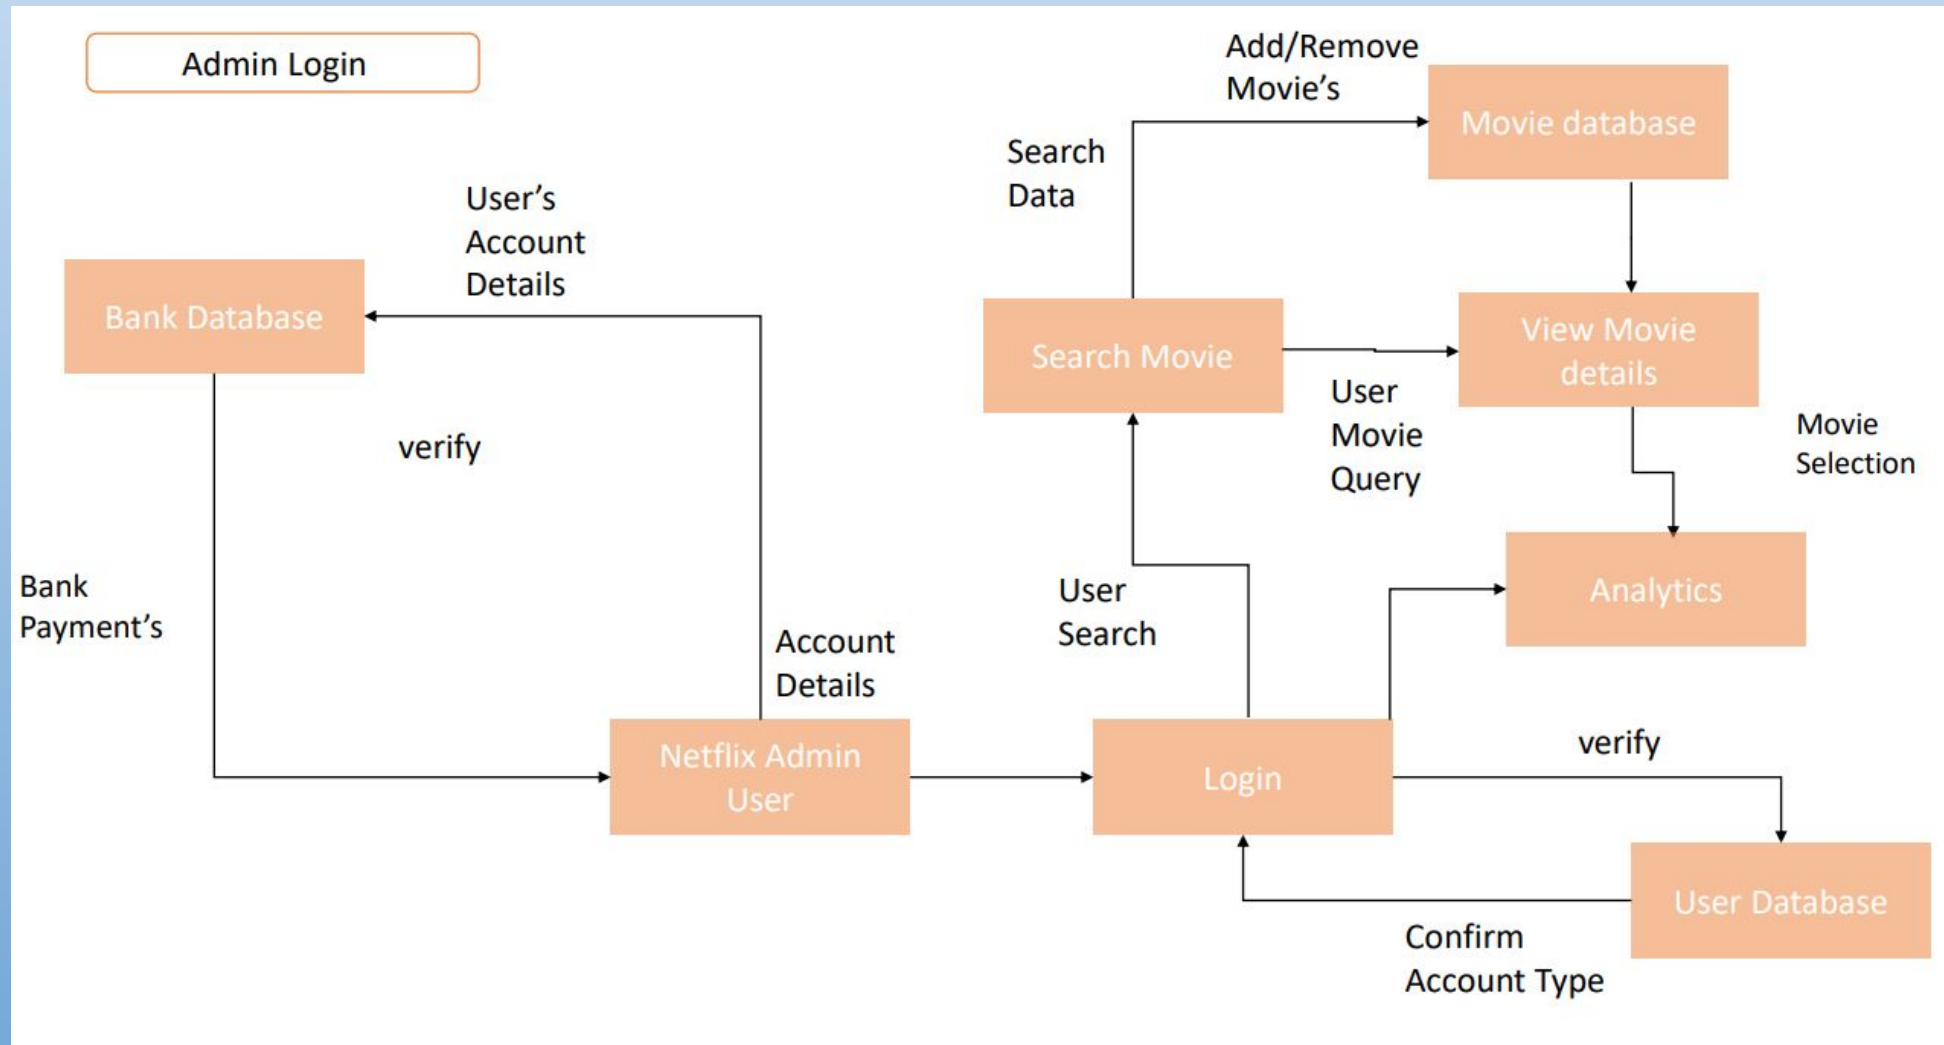

# Netflix New User Login Model

# Netflix Existing User Login Model

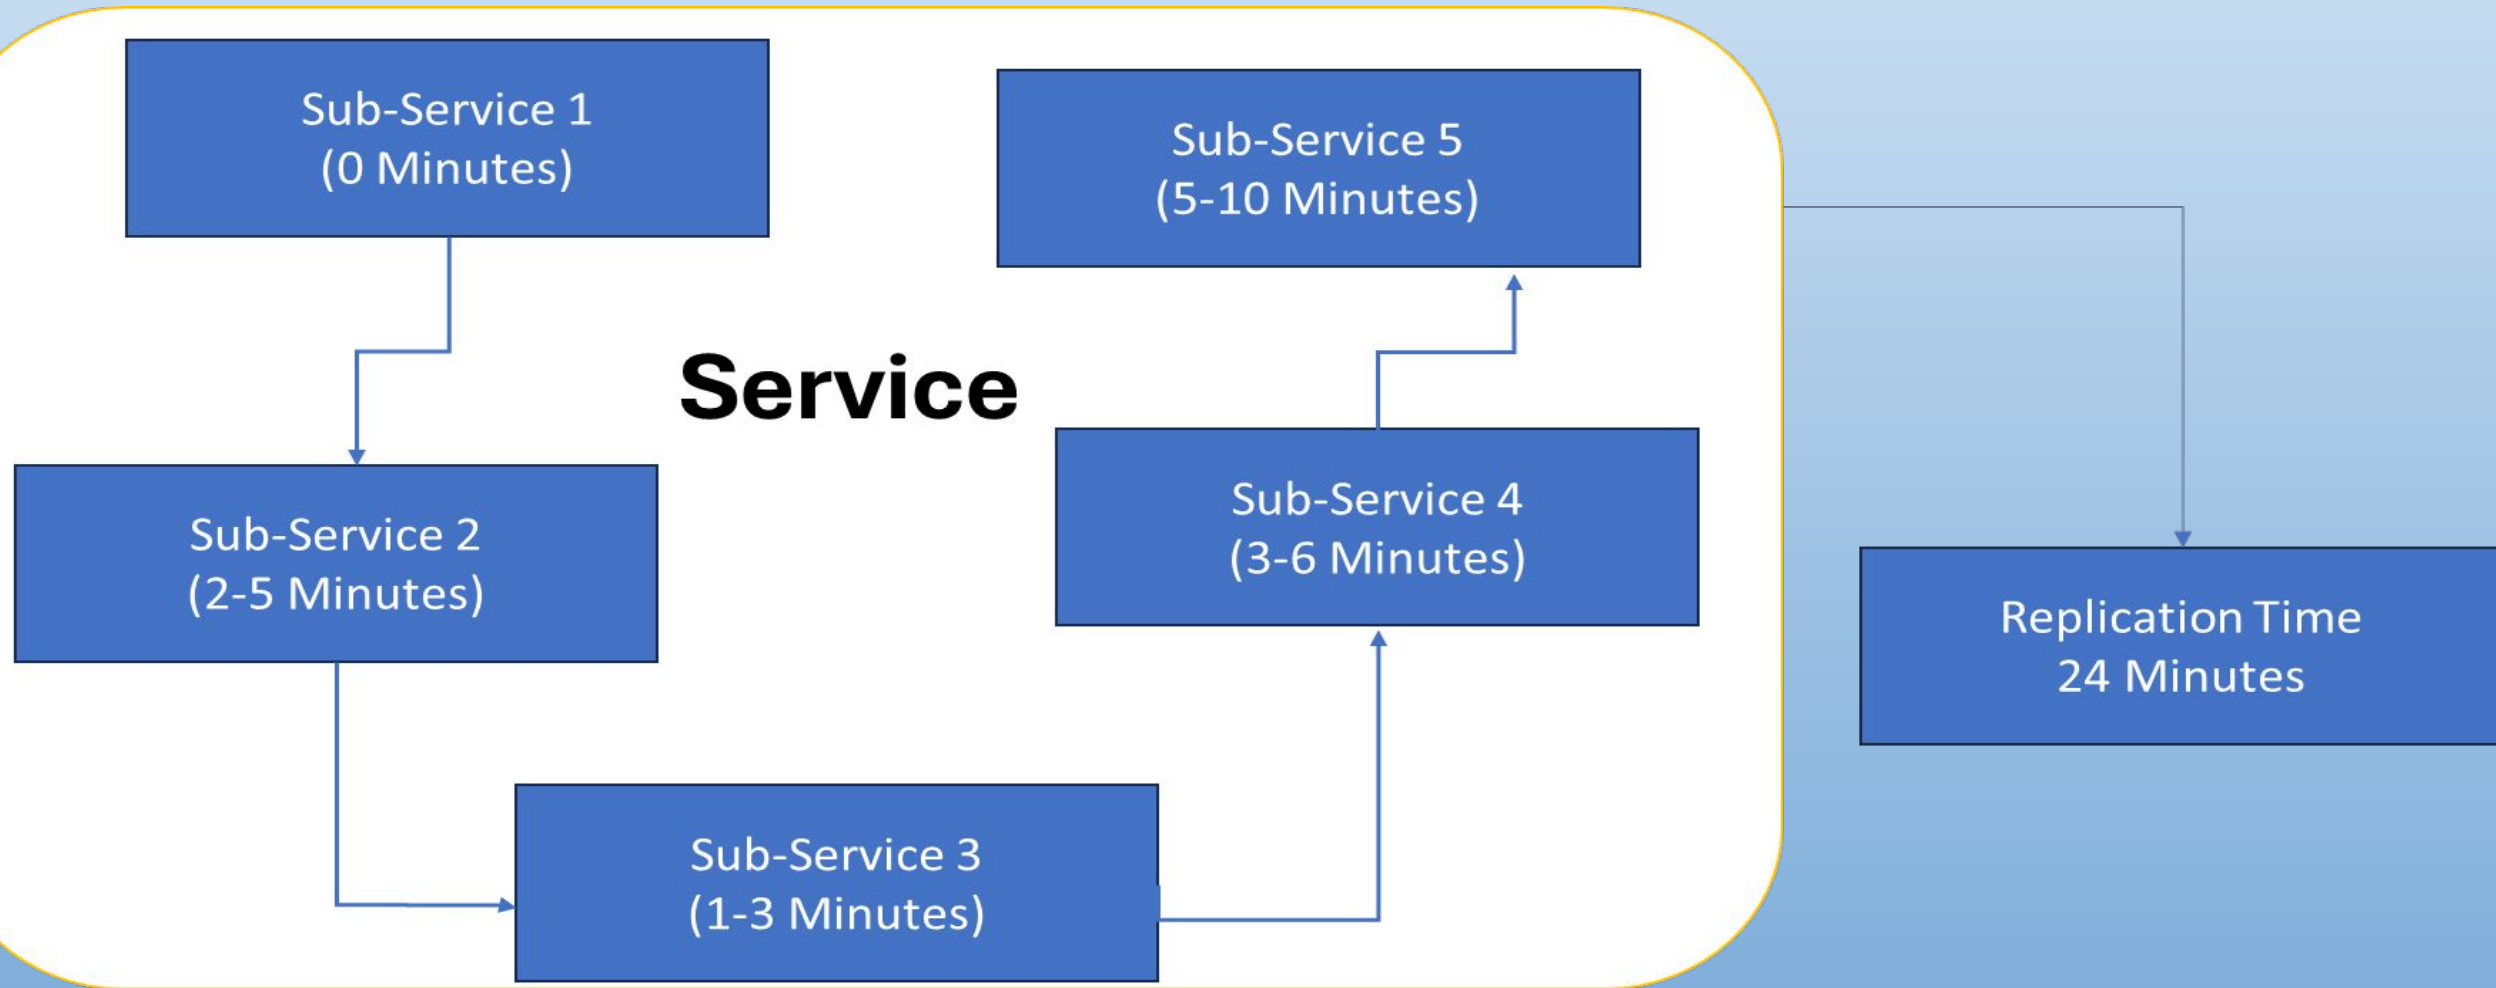

# Netflix Admin Login Model

# Replication Time Calculation

Service Replication time = 0 + 5 + 3 + 6 + 10 = 24 Minutes.

# Replication Time Calculation

## A) Content Service:

- Content Ingestion and Catalog Management: Real-time replication (0 seconds, 0 minutes delay).
- Content Recommendation Engine: Every 60-180 seconds (1-3 minutes)
- Content Delivery and CDN Management: Every 120-300 seconds (2-5 minutes).
- Content Metadata Management: Every 180-360 seconds (3-6 minutes).
- Content Licensing and Rights Management: Every 300-600 seconds (5-10 minutes).

**Total replication time of content service=3+5+6+10=24 minutes**

## B) User Service:

- User Authentication and Authorization: Real-time replication (0 seconds, 0 minutes delay).
- User Profile Management: Every 60-180 seconds (1-3 minutes).
- User Preferences and Personalization: Every 120-300 seconds (2-5 minutes).
- User Account Billing and Subscription: Every 180-360 seconds (3-6 minutes).

**Total replication time of user service=3+5+6=14 minutes**

## C) Playback Service:

- Video Playback Engine: Real-time replication (0 seconds, 0 minutes delay).
- Audio Playback Engine: Every 120-300 seconds (2-5 minutes).
- Video Quality Optimization: Every 180-360 seconds (3-6 minutes).
- Playback Control and User Interaction: Every 300-600 seconds (5-10 minutes).

**Total replication time of playback service=5+6+10=21 minutes**

## D) Recommendation Service:

- Recommendation Algorithms: Real-time replication (0 seconds, 0 minutes delay).
- User Behavior Tracking: Every 60-180 seconds (1-3 minutes).
- Content Similarity Analysis: Every 180-360 seconds (3-6 minutes).

**Total replication time of recommendation service=3+6=9 minutes**

### **E) Payment Service :**

- Payment Gateway Integration: Every 60-180 seconds (1-3 minutes).
- Subscription Management: Every 120-300 seconds (2-5 minutes).
- Billing and Invoicing: Every 180-360 seconds (3-6 minutes).

**Total replication time of analytic service=3+5+6= 14 minutes**

### **F) Analytic Service:**

- Data Analytics and Reporting: Every 600-1800 seconds (10-30 minutes).
- User Engagement Analytics: Every 900-2700 seconds (15-45 minutes).
- Content Quality Analytics: Every 1200-3600 seconds (20-60 minutes).

**Total replication time of analytic service=10+15+20= 45 minutes**

### **G) External Service:**

- Integration with Third-Party Services: Every 120-300 seconds (2-5 minutes).
- External Content Providers: Every 180-360 seconds (3-6 minutes).
- External API Management: Every 120-300 seconds (2-5 minutes).

**Total replication time of external service=5+6+5=16 minutes**

### **H) Customer Service:**

- Customer Support and Helpdesk: Real-time replication (0 seconds, 0 minutes delay).
- Customer Feedback and Surveys: Every 600-1800 seconds (10-30 minutes).
- User Community Forums: Every 900-2700 seconds (15-45 minutes).

**Total replication time of customer service=10+15= 25 minutes**

# Replication Time of Services

## A) Content Service:

Total replication time =  $3+5+6+10=24$  minutes.

## B) User Service:

Total replication time =  $3+5+6=14$  minutes

## C) Playback Service:

Total replication time =  $5+6+10=21$  minutes

## D) Recommendation Service:

Total replication time =  $3+6=9$  minutes

## E) Payment Service:

Total replication time =  $3+5+6=14$  minutes

## F) Analytic Service:

Total replication time =  $10+15+20= 45$  minutes

## G) External Service:

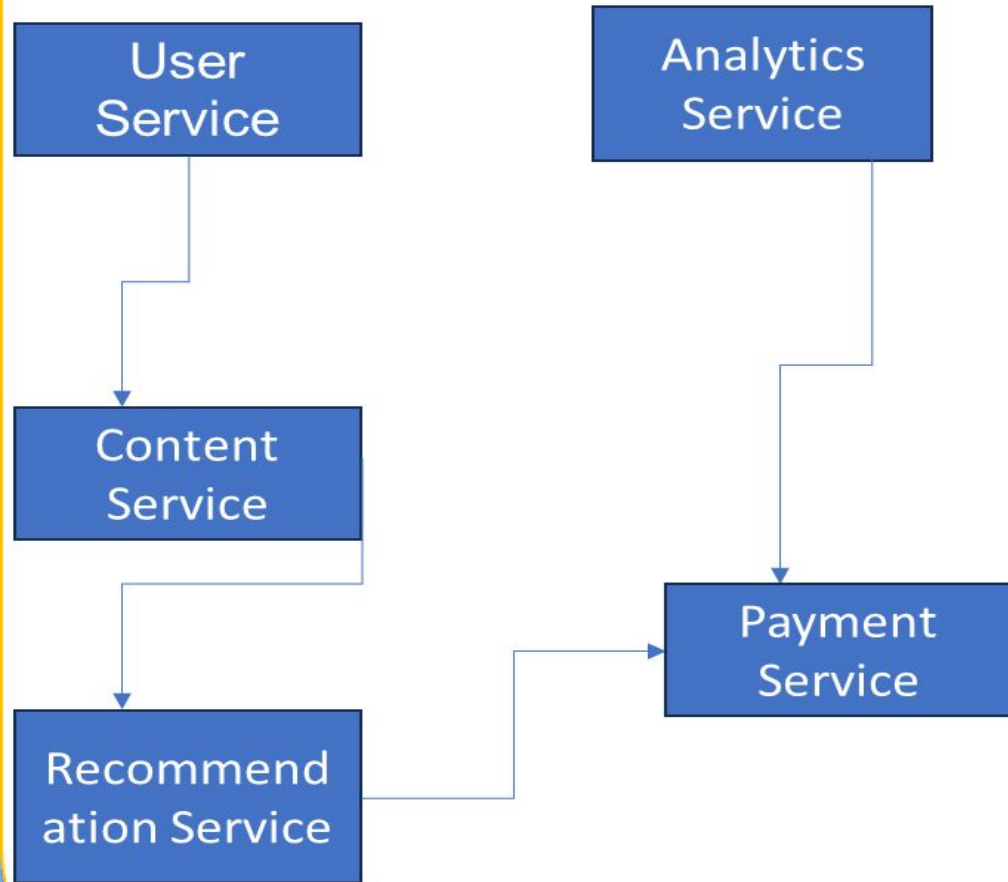

Total replication time =  $5+6+5=16$  minutes

## H) Customer Service:

Total replication time =  $10+15= 25$  minutes

# Case Failure

LOGIN PAGE :-

LOCATION 1

REPLICATION OF DATABASE

LOCATION 2

# Results

## **Case 1 :-** Payment service Failed

Only the payment service hang ; new user can't register :

Expected RTO :- Payment Gateway Integration + Subscription

Management + Billing and Invoicing =  $3+5+6=14$  minutes For Recovery.

## **Case 2 :-** Content Service and Recommendation Failure

Expected RTO which is calculated is :- Content Service +

Recommendation Service Time :- 33 Minutes Recovery .

## **Case 3 :-** Login page Failure :

Services Includes:

Expected RTO when the whole page get hang:

User Service + Content Service + Recommendation Service + Payment

Service + Analytics Service + External Service=

122 Minutes For Recovery.
